## School of Computing and Information Systems The University of Melbourne COMP90042

WEB SEARCH AND TEXT ANALYSIS (Semester 1, 2019)

Week 1: Self study

## **Programming**

- 1. Practise your Python on the online learning platform, Grok Learning, https://groklearning.com.
  - (a) Login to Grok Learning with your university email and password
  - (b) If needed, start with *Intro to Programming (Python) by Grok Learning* to practise the Python basics.
    - https://groklearning.com/course/intro-python-1/
  - (c) Otherwise, you can attempt *Intro to Programming 2 by Grok Learning* to practise the intermediate Python skills.
    - https://groklearning.com/course/intro-python-2/
- 2. Setup your Python environment with numpy, sklearn and nltk packages installed (i.e. you can import them).

There are no workshops in week 1. However, one lab session with a tutor will be arranged in week 1 to help you with Python programming. You can come to the lab session if you have any questions about Python. Details about the lab session will be announced on LMS.

## Catch-up

- (Re-)familiarise yourself with Python, if you haven't used it recently. In particular, focus on string and array processing, including regular expressions. Also revise functions and mapping mathematical formulae to Python syntax (including the numpy package).
- Familiarise yourself with the Natural Language Toolkit (NLTK). You might like to use the e-book http://nltk.org/book as a resource; it also covers some of the basics of Python, if you've never used the language before.
